Docket No.: 60680-1780

Application No. 10/708,928 Amendment dated After Final Office Action of July 28, 2005

AMENDMENTS TO THE CLAIMS

- 1. (Previously Presented) A fastener assembly for coupling at least two components of an engine, comprising:
 - a threaded fastener having a head portion and a shaft portion;
 - a retention sleeve disposed about the threaded fastener; and
- a wave spring disposed about the retention sleeve; wherein the wave spring has an inner diameter slightly larger than an outer diameter of the retention sleeve and wherein the fastener assembly acoustically decouples the components.
 - 2. (Canceled)
- 3. (Original) The fastener assembly according to Claim 1, wherein the head portion of the threaded fastener includes a radially projecting collar.
- 4. (Original) The fastener assembly according to Claim 1, wherein the retention sleeve includes a radially outwardly projecting head flange.
- 5. (Original) The fastener assembly according to Claim 1, wherein the threaded fastener, the retention sleeve, and the wave spring are made of metallic material.
- 6. (Previously Presented) The fastener assembly according to Claim 1, wherein the wave spring abuts a portion of the retention sleeve such that the wave spring is selectively prevented from being fully compressed.
- 7. (Previously Presented) A fastener assembly for coupling at least two components of an engine, comprising:
 - a threaded fastener;
- a retention sleeve disposed about the threaded fastener, wherein the retention sleeve includes a flange section and a necking portion that extends downward from the flange section; and

a wave spring disposed about the retention sleeve; wherein the fastener assembly acoustically decouples the components.

8. (Previously Presented) The fastener assembly according to Claim 7, wherein the flange section has a circumferential extent that is greater than the necking portion.
